## VULKAN Lokring will produce its **two billionth Lokring** in 2016

**VULKAN Lokring has been developing, producing and selling VULKAN Lokring mechanical tube connections for refrigerant lines for 37 years.**

The traditional company, which operates around the world, has become so successful that this year the two billionth Lokring will be produced in one of the five production facilities in Germany, the USA, China, India or Brazil.

Lokring tube connection technology is used in commercial refrigeration and

air conditioning technology. The solder-free, unbreakable, purely mechanical tube connections with their permanent hermetic seal have been impressing customers in refrigeration and freezing and in cooling and air conditioning units for buildings and motor vehicles for decades.

To date, around 7,000 customers in 83 countries around the world have used the various compatible Lokring products to connect their copper, steel and aluminium tubes.

All Lokring products meet German quality standards and have the relevant certifications.

As the only manufacturer of solder-free tube connections, Lokring tests its products at its own testing laboratory at its headquarters in Herne, Germany.
